

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A page index system comprising:
a page data store that stores reference information associated with a page, the reference information is obtained from at least one other page, the reference information comprising descriptive information that is adjacent to anchor text associated with a referencing uniform resource locator that references the page; and
a crawler component that receives the page, retrieves the reference information associated with the page from the page data store, and provides the page and the reference information to at least an index building component.
2. (Original) A web crawler employing the system of claim 1.
3. (Previously presented) The system of claim 1, the reference information further comprising anchor text.
4. (Currently amended) The system of claim [[3]] 1, the reference information comprising at least one of a sentence fragment, a sentence [[and]] or a paragraph, or a combination thereof, adjacent in proximity to the anchor text a referencing uniform resource locator.
5. (Previously presented) An Internet search engine employing the page and the reference information provided by the system of claim 1.

6. (Currently amended) The system of claim 1, the page data store stores a uniform resource locator that identifies ~~[[a]]~~ the page, the uniform resource locator further employed to identify the reference information associated with ~~a particular~~ the page.
7. (Original) One or more readable media having stored thereon computer executable instructions for carrying out the system of claim 1.
8. (Currently amended) A crawler comprising:
an input component that receives a page;
a parser component that parses the page for another page referenced on the page, and stores reference information associated with the another page in a page data store, the reference information comprising descriptive information that is in proximity to anchor text associated with a referencing uniform resource locator that references the another page;
a retrieval component that receives the another page and retrieves the reference information associated with the another page from the page data store; and
an output component that provides an output, comprising the another page merged with the reference information associated with the another page, to an index building system.
9. (Original) A page indexing system comprising the crawler of claim 8.
10. (Original) The page indexing system of claim 9 further comprising the page data store.
11. (Canceled.)
12. (Currently amended) The system of claim ~~[[11]]~~ 8, the page data store stores a uniform resource locator that identifies a particular page, the uniform resource locator further employed to identify the reference information associated with ~~[[a]]~~ the particular page.

13. (Previously presented) The crawler of claim 8, the reference information further comprising anchor text.
14. (Currently amended) The crawler of claim [[13]] 8, the reference information comprising at least one of a sentence fragment, a sentence [[and]] or a paragraph, or a combination thereof, in proximity to the anchor text ~~a referencing uniform resource locator~~.
15. (Currently amended) A method facilitating page indexing comprising:
retrieving reference information associated with a page from at least one other page, the reference information comprising descriptive information that is in proximity to anchor text associated with a referencing uniform resource locator that references the page; [[and]]
merging the page with the reference information; and
providing an output comprising the page merged with the reference information associated with the page to at least an index building system.
16. (Currently amended) The method of claim 15, further comprising at least one of the following:
receiving a request for retrieving the page;
retrieving the page; [[and]] or
storing reference information associated with a uniform resource locator on [[a]] the page, or a combination thereof.
17. (Original) The method of claim 15, retrieval of the reference information associated with the page being based, at least in part, upon a uniform resource locator identifying the page.
18. (Original) One or more computer readable media having stored thereon computer executable instructions for carrying out the method of claim 15.

19-21. (Canceled.)

22. (Currently amended) One or more computer readable media storing computer executable components of a crawler comprising:

an input component that receives a page;

a parser component that parses the page for another page referenced on the page, stores reference information associated with the another page in a page data store, the reference information comprising descriptive information that is in proximity to anchor text associated with a referencing uniform resource locator that references the another page;

a retrieval component that receives the another page and retrieves the reference information associated with the another page from the page data store; and

an output component that provides an output, comprising the another page merged with the reference information associated with the another page, to at least an index building system.

23. (Currently amended) The media of claim 22, the page data store storing a uniform resource locator that identifies [[a]] the another page, the uniform resource locator further being employed to identify the reference information associated with ~~a particular~~ the another page.

24. (Previously presented) The media of claim 22, the reference information further comprising anchor text.

25. (Currently amended) The media of claim 22, the reference information comprising at least one of a sentence fragment, a sentence [[and]] or a paragraph, or a combination thereof, in proximity to the anchor text a referencing uniform resource locator.

26. (Currently amended) A page index system comprising:

means for retrieving reference information associated with a page from at least one other page;

means for storing ~~the~~ reference information ~~associated with a page~~, the reference information comprising descriptive information that is adjacent to anchor text associated with a uniform referencing locator that references the page;

means for receiving the page;

means for retrieving the reference information associated with the page from means for storing the reference information; and

means for providing an output to at least an index building system, the output comprising the page merged with the reference information associated with the page.

27. (Currently amended) The system of claim 26, the means for storing the reference information further storing a uniform resource locator that identifies ~~[[a]]~~ the page, the uniform resource locator further being employed to identify the reference information associated with ~~a particular~~ the page.

28. (Previously presented) The system of claim 26, the reference information further comprising anchor text.

29. (Currently amended) The system of claim 26, the reference information comprising at least one of a sentence fragment, a sentence ~~[[and]]~~ or a paragraph, or a combination thereof, ~~in proximity adjacent~~ to a referencing uniform resource locator.
